Ki Pro Release Notes - v3.2

Firmware update for Ki Pro

Introduction

This version provides improvements for Ki Pro. Be sure to consult the Installation and Operation Guide (user manual) for detailed information about features and configuration guidelines. The most current documentation can always be found in the Support section of www.aja.com.

New Features

- User Authentication menu parameter added. This parameter enables or disables an authentication login requirement when using the web UI. If enabled, the web browser will present a login screen requiring that a password be entered before access will be granted to any other parameter or configuration screen. This provides a minimum security safeguard against unauthorized use of the Ki Pro in a networked environment.
- Interval Record notification added to the STATUS display pages. This new STATUS page will appear if Interval Record is enabled.

Improvements and Fixes

- Resolved an issue specific to the use of Safari 6 and the web UI when creating Playlists.
- Addressed an issue where two simultaneous stop commands issued by an RS-422 controller could cause a loss of a/v sync when playback was restarted.
- Addressed an issue where SD video output could sometimes be disrupted.

Because it matters.™

Special Considerations

- AJA recommends a Factory Reset under the CONFIG menu prior to updating firmware.

- After a firmware update, the web browser (Safari, Firefox, etc.) may lose its connection. A refresh of the web browser will reconnect the web UI.

- Some clips created by Ki Pro may cause Final Cut Pro 7 to bring up a "not optimized" prompt when imported. These clips are valid and can be used within Final Cut Pro 7.

- Do not attempt firmware updates while recording is in progress; be sure the device is in the stopped state before performing a firmware update.
